Customer Engineering Handbook 7040-7044 Data Processing Systems

AFETY

Ungrounded oscilloscopes are dangerous. Voltages that are not referenced to ground are safely measured by using the Tektronix type CA plug-in unit available for all Tektronix 500 series oscilloscopes except the Tektronix 561A oscilloscope. The add feature of the type CA plug-in unit is incorporated in the type 3A1 plug-in unit for the Tektronix 561A oscilloscope. The add feature is explained in the IBM Tektronix Oscilloscopes CE Manual of Instruction, Form 223-6725-4, available from Stationery Stores, Endwell, New York.

Pressing the master power disconnect key does not remove 24 vac from the console or power supply area. For your own personal safety, disconnect all power via the customer's wall switch before working in these areas.

Pressing the normal power off key does not remove power from the convenience outlets nor the -48 vdc from the power supply area or the console. For your own personal safety, disconnect all power via the customer's wall switch before working in these areas.

Your own personal safety cannot be overemphasized. Make it a daily practice to work safely. Be familiar with safety practices listed on IBM Form 124-0082. Is your installation a safe place to work?

Are you working alone?

Are you wearing your safety glasses?

Did you turn off the power to replace that fuse? Did you turn off the power to replace that SMS

card?

Did you discharge the capacitors when you worked on that dc power supply?

Did you replace all of the safety covers?

MINOR REVISION (May 1964)

This edition, Form 223-2640-2, is a minor revision and does not obsolete any of the previous printings. This book reflects the latest information generated to assist Customer Engineers in maintaining the 7040 and 7044 Data Processing Systems. Many of the additions result from requests made by Customer Engineers on the postpaid comment card supplied in the back of each book.

Copies of this and other IBM publications can be obtained through IBM Branch Offices.

Address comments concerning the content of this publication to: IBM Corporation, CE Manuals, Dept. B95, PO Box 390, Poughkeepsie, New York 12602

7040-7044 CUSTOMER ENGINEERING MANUALS March 11, 1964

All of these manuals are stocked in Endwell Stationery Stores.

CEIM or CEIR are combination Instruction-Maintenance Manuals.

CEMI is a CE Manual of Instruction.

CEMM or CERM are CE Maintenance Manuals.

ISD are Instructional Systems Diagrams.

| TRAP | TRAP NAME | REASON FOR TRAP | WHEN TRAP CAN OCCUR | TRAP RESTRICTIONS | STORE *8 LOCATION | TRANSFER *9 | DISABLING EFFECT OF TRAP | EFFECT MAY BE NULLIFIED ARY |
| PRIORITY | Interval Timer Blast | A "C" cycle request is received before the preceding "C" cycle request is honored. 33 milliseconds have expired since the interval timer was last stepped. | A "C" cycle request may occur (and therefore a Trap request) 1) Between instructions 2) During RDS, PRD, SEN, WRS, PWR, CTR, BSR, REW, WBT, RUN, WEF instructions. 3) Between "U" cycles during execution of a RCHA instruction. A trap request initiates an immediate trap. | None | 00036 | 00037 | 1) Trap control | be turned on by executing a TRT |
| 2 *** | | A store is attempted in a protected area of core. NOTE: Input information from an I/O device is never prevented from storing in a protected area. | Immediately after an "E" cycle attempting (it will not succeed) to store in a protected area of core. | 1) Trap control on *' 2) Protect mode on *' If trap control is off, protect mod on, and a violation occurs, the store will be successfu and a trap will not occur. | ı | 00033 | 1) Protect mode turned off. 2) Violating instructions are not allowed to store (or complete, in the case of the Transmit Instruction; on other instructions, the E store cycle will be the last cycle) 3) Trap control turned off. | instruction. Trap control may be |

| TRAP PRIORITY | TRAP NAME | REASON FOR TRAP | WHEN TRAP CAN OCCUR | TRAP RESTRICTIONS | STORE *8 LOCATION | TRANSFER *9 LOCATION | DISABLING EFFECT OF TRAP | HOW DISABLING EFFECT MAY BE NULLIFIED |
|---|--------------|--|--|--|--|-------------------------|--|---|
| 3 ** MP Violation and Parity traps have no priority over each other, because when one of the errors occurs, the other is not possible in the same instruction. | Parity | Storage parity error during: 1) "I" or "IA" cycles 2) "E" or "C" cycles which do not store. NOTE: Parity is not checked during the "E" cycle of a CAP instruction. "B" or "U" Cycle parity errors will not cause a parity trap. A channel trap may be requested if the operation or parity mask bit is enabled for that channel. See channel traps. If bad parity is detected when reading out of core during any type cycle, the word is regenerated back in core with bad parity. | 1) Immediately after the "I", "IA", or "E" cycle causing the parity error. An instruction requiring additional cycles will not complete. 2) For a parity error during a "C" cycle taken during the execution of an instruction, the instruction will be allowed to complete before the trap is initiated. 3) For a parity error during a "C" cycle taken between instructions, the trap will be immediate. | 1) Trap control on *2 2) Parity control on *2 *2 parity errors detected with either trap control or parity off do not cause an immediate trap and do not interrupt an instruction. However, the error is remembered and will cause a trap as soon as trap and parity control are on. | 00040 Bit S Flag indicates error occurred when parity or trap control was off. *2 Bit 1 Flag "C" cycle error. Bit 18 Flag "I" or "IA" cycle error. Bit 19 Flag "E" cycle error. Bit 3-17 will contain the location in error if not a "C" cycle or delayed error. | 00041 | 1) Trap control turned off. 2) Parity control turned off. 3) Parity errors detected during multicycle instructions will prevent any remaining cycles from being taken to complete the instruction. | Trap control and parity control may be turned on by executing a TRP instruction. Trap control may be turned on and parity control left off by executing a TRT instruction. |

| 4 All instruction | SPM*7 | SPM instruction with protect mode on. | Execution of SPM instruction causes the trap. | Protect mode on | 00032 Bit 16 Flag | 00033 | 2) Trap control turned off. | be turned on by executing another SPM instruction See Note below. |
|---|-------|--|---|-----------------|--|-------|--|---|

Second Level MAD

The output of the second level MAD circuits are primary 16 pairs. One line of each pair is active during read, while the other line is active during write. Which line of the pair is active for read or write is determined by first and second level MAD switching. The output lines are numbered 1 through 16 and NOT 1 through NOT 16. Hence, either 1 or NOT 1, 2 or NOT 2, etc. is active for each read. If 1 is active at read time, then NOT 1 is active at write time.

The following chart shows the lines 1 through 16 that are active during read time.

| Second | l Le | vel : | MAI | De | codi | ng - | Rea | d | | | | | | | | |

731 INPUT - OUTPUT DEVICE

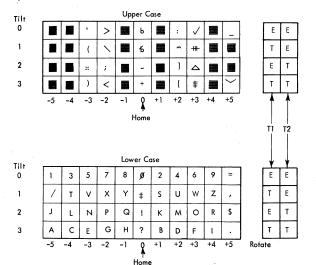

The 731 console printers used on the 1410 and 7040/44 systems are interchangeable.

731 Type Arrangement A - Report Writing

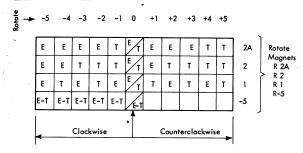

731 Type Arrangement H - Program Language

The type H head is used for FORTRAN and programming the 7040/44 $\ensuremath{\,\mathrm{system}}$.

731 Select Latch Chart

T = Contact Transferred E = Magnet Energized T1, T2, R1, R2, R2A - Not Energized, Transfer Their Respective Contacts R5 Energized - Transfers Contact *Note:

Home position blocks are split or upper and lower case
Chart is shown for output cycle using magnets. Contacts transferred on input cycles are the same as shown, except for upper case home position. On input, home position in either case will transfer contacts as shown for lower case.

* These overlap channel test points are for channels 1 and 3.

To use these test points for channels 2 and 4, change the chassis locations from 1 to 2 and from 3 to 4. For example:

Channel 1 and 3 test point is the same as

02A1J27B or 02A3G23B 02A2J27B or 02A4G23B

Channel 2 and 4 test point

DIAGNOSTIC PROGRAMS

HARD CORE TESTS

4HC1A Hard Core Basic Test

- 1. Load cards 1-13 in BCD card reader
- 2. Make reader ready--EOF on--START
- 3. Read select BCD reader in keys
- 4. RESET AUTO on LOAD

For each succeeding card--RESET and LOAD.

| Number | Test | Normal H | alt in SR |
|--------|----------------------|-------------|-----------|
| 1 | Ones to AC + MQ | HPR | 00001 |
| 2 | Zeros to AC + MQ | HPR | 00002 |
| 3 | Minus Alternates | HPR | 00003 |
| 4 | Plus Alternates | HPR | 00004 |
| 5 | SS 1-2-3 Off | HPR | 00005 |
| 6 | SS 4-5-6 Off | HPR | 00006 |
| 7 | SS 1-2-3 On | HPR | 00007 |
| 8 | SS 4-5-6 On | HPR | 00010 |
| 9 | Keys to ACC | | |
| | IORD to MQ | HPR | 00011 |
| 10 | Typewriter Test | HPR | 00012 |
| 11 | Type: Hard Core Test | HPR | 00013 |
| 12 | Reads Thirteen | | |
| 13 | Type: Loader OK etc. | $_{ m HPR}$ | 00216 |

1. Put card 14 before each program deck.

This is a one card BCD load to 1005.

Only one program in the reader at a time.

Decks are full BCD and must be in order.

2. Read select BCD reader in keys.

See Sense Switches listed below.

3. RESET and LOAD.

Following programs have slight changes for use without DCP.

| | Error Halt | Normal Halt in SR |
|-------|---------------------|-------------------|
| HC51A | HPR 51 Adr of Halt | HPR 51 00051 |
| HC52A | HPR 52 Adr of Halt | HPR 52 00052 |
| HC53A | HPR 53 Adr of Halt | HPR 53 00053 |
| HC54A | HPR 54 Adr of Halt | HPR 54 00054 |
| HC55A | HPR 55 Adr of Error | HPR 55 00055 |

| Sense Switches | | |
|-------------------|----|---|
| 1 | on | Loop routine |
| 2 | on | Bypass errors |
| 3 | on | HC55 can halt on error |
| 4 | on | HC55 bypass long typeout |
| 5 | on | No effect |
| 6 | on | Repeat program. Type out after 1000 passes. |

4HC2A Hard Core Test from Tapes

- Load 4HC2 tape on any drive on any channel, except 1401 tapes.
- 2. Read select the tape drive in binary mode in the keys.
- 3. RESET AUTO on LOAD
- 4. For each succeeding record--RESET and LOAD

| Number | <u>Test</u> | Normal H | alt in SR |
|--------|----------------------|-------------|-----------|
| 1 | Ones to AC + MQ | HPR | 00001 |
| 2 | Zeros to AC + MQ | HPR | 00002 |
| 3 | Minus Alternates | $_{ m HPR}$ | 00003 |
| 4 | Plus Alternates | $_{ m HPR}$ | 00004 |

| 11 | Type: Hard Core Test | HPR | 00013 |
| 12 | Reads Thirteen | | |
| 13 | Type: Loader OK etc. | $_{ m HPR}$ | 00216 |
| 4 | | | |

Record 14 is a dummy--needed after each LOAD as LOAD spaces tape.

Fifteen is a loader for hard core versions of CPU diagnostics 51-55.

See Sense Switches listed below.

RESET and LOAD.

Following programs have slight changes for use without DCP.

| | Error | Hai | lt | | Normal | Hal | t in SR |
|-------|-------|-----|--------------|---|--------|-----|---------|

LOAD AND GO

From Binary Cards

- Load 4DC1 in the card reader with other desired binary decks following.
- 2. EOF on START.
- 3. Set panel keys to +0762 030 01230.
- 4. RESET AUTO on LOAD

Halt 00000 will display contents of 472 in the Acc and contents of 471 in the MQ. If the configuration words displayed are not correct, set AUTO off and manually load locations 472 and 471 with configuration words 1 and 2 respectively.

5. AUTO on - START

From BCD Cards

- Load 4DC2 in the card reader with other desired BCD decks following.
- 2. EOF on -START.
- 3. Set panel keys to +0762 030 01210.
- 4. RESET AUTO on LOAD.

Halt 00000 will display contents of 472 in the Acc and contents of 471 in the MQ. If the configuration words are not correct, set AUTO off and manually load locations 472 and 471 with configuration words 1 and 2 respectively.

5. AUTO on - START.

From DCP Binary Tape

- 1. 4DC3 will be on the prepared tape.
- 2. Load tape on desired channel on tape unit 1.
- 3. Set proper RDS in the panel keys +0762 000 0XXXX.

For channel A, XXXXX equals 1221.

For channel B, XXXXX equals 2221.

For channel C, XXXXX equals 3221.

For channel D, XXXXX equals 4221.

For channel E, XXXXX equals 5221. 4. Change prefix in keys from +0 to -0.

- 5. Turn on Sense Switch 5.
- 6. RESET AUTO on LOAD.

Halt 00000 will display contents of 472 in the Acc and contents of 471 in the MQ. If the configuration words displayed are not correct, set AUTO off and manually load locations 472 and 471 with configuration words 1 and 2 respectively.

- 7. Release Sense Switch 5.
- 8. AUTO on START.
